Clandestine Lab Awareness for Firefighters

Firefighters, fire inspectors, and law enforcement need to recognize products and chemicals that are commonly used in clandestine labs and they need to know how to treat a clandestine lab encounters. There are numerous hazards that are prevalent with methamphetamine production and the ability to identify and properly respond to those hazards is survival for a first responder. The course addresses methamphetamine history, effects, lab recognition & trend production, and survival response. The course provides lifesaving information that can be shared with other first responders.

The course is taught by retired narcotics detective Randy Keys. Randy is a graduate of the National Drug Enforcement Officers Academy and was assigned to the DEA task force. While assigned to the DEA Randy held clan lab site safety and tactical entry certification. Currently, Randy teaches narcotic investigation courses and clan lab certification. Randy is a graduate of St Leo College and has a B.S. in Criminal Justice.
